# Roadmap

- AJAX：

For AJAX, I am going to use it as a data request. In my gallery, there are related data for each of my projects. I use AJAX and JSON to request the URL of each project image and text information about the project.

and then all the data will be displayed on the screen

-ERROR：

An error 404 page will appear after an error occurs in the request..

- Gallery：

Here I am going to add a layer of overlay for each projects. Whenever the projects is clicked by the mouse, the picture will be selected with animation and overlay, and the related information of the item will be displayed on the overlay.

- Home page :

In the homepage, I want to add some animations to the banner to keep the

text on it playing.

The info contain:

- Tool

- The name of projects

- Maybe some description

- **<u>About me：</u>**

This page wants to make an animation.
